Fu Xiaoling

Basic Info:

phone：15921501629 address：Shanghai

date of birth：Jan 1993 gender：female

email：fu_xiaoling@qq.com

Education:

- Master of Computer Science and Technology, Tongji University | 2015.09-2018.03
- Bachelor of Computer Science and Technology, Zhengzhou University | 2011.09-2015.06

Skills:

- Programming Languages: Python, Java, Shell
- Databases & Tools: MySQL, InfluxDB, Git, Linux
- Testing & DevOps Frameworks: Jenkins, Robot Framework, Pytest, Docker, K8s, Grafana
- AI：skill, LangChain, VectorDB

Work:

Senior Software Engineer, EMC | 2021.04 – 2026.05

worked on the Metadata Layer team, responsible for testing and validating the distributed metadata index engine of OBS, with a focus on performance optimization including multi-threaded fiber dump, ssd read cache, unplanned node down..

- **Project testing:** Designed and implemented 100+ test cases covering functional, performance, fault injection, and upgrade scenarios. Additionally, developed shared test infrastructure libraries, including load injection, upgrade job interation, continuous performance tracking and case result collection.
- **Automation&CICD:** Integrated 21 team test jobs(460 cases) into the CI/CD pipeline workflow, enabling automated continuous testing and release quality assurance.
- **Scrum Leader:** Served as Scrum Leader, responsible for organizing and leading team meetings
- **Production issue troublesshooting**: proactively responded to issue inquiries from cross-functional teams, conducted in-depth investigation and root cause analysis, and collaborated to drive timely problem resolution.
- **AI practice:** developed a suite of productivity-enhancing AI skills, including a diagnostic skill for DT unready issues, automated PR submission skill, and so on. Participated in an AI hackthon and contributed to the obs stability insights platform, taking ownership of the RAG pipeline - converting technical documentation into a searchable vector knowledge base.

Software Engineer 2, EMC | 2018.04 – 2021.03

responsible for GC(space reclamation) longevity monitoring and issue investigation, tracking GC health metrics. Also supported as well as crooss-team test tasks.

- **Longevity monitoring:** Conducted long-term monitoring of cluster GC health, it is an important part for ECS, delivering daily status reports with data analysis and initial issue triage. Identified 100+ critical bugs during monitoring cycles, reducing the risk of potential data loss.
- **Project Testing:** Independently led testing efforts across multiple service teams, developing deep expertise in the ECS object storage system. Designed comprehensive test plans, executed test cases efficiently, and continuously improved test coverage and product quality.

About me:

A self-motivated and optimistic engineer with a strong learning mindset. Equally effective working independently and collaborating within a team, with a proven ability to take ownership, solve complex problems, and deliver results.
